The R&A perspective.

Mark Darbon, Chief Executive, The R&A

Welcome to The R&A Global* Golf Participation Report for 2024, providing an overview of global golf through an analysis of the number and breakdown of golfers and golf courses in R&A affiliated national federations around the world.

This report collates data gathered in the same year from Asia, Africa, Canada, the Caribbean, Central & South America, Europe, the Middle East and Oceania. It excludes the USA and Mexico which fall under the jurisdiction of the USGA.

Having started my role as Chief Executive of The R&A late last year, I have enjoyed immersing myself in the sport in recent months and I am delighted to see participation continue to grow in our affiliated markets, encompassing 148 countries.

Across all formats of the sport – and including junior data for the first time thanks to new analytical tools – it is pleasing to highlight that 108 million people are playing golf, an increase of almost three million from 2023. Over 100 million golfers is a significant milestone and one to be celebrated.

The growth in non-traditional formats such as golf simulators, pitch and putt and adventure golf is helping drive participation among adults and juniors on a global scale. On-course golf also remains very popular and there are now 43.3 million golfers playing on 9 and 18 hole courses. This continues the growth we have seen in recent years and is up on the 42.7 million figure from 2023.

*Global excluding the USA and Mexico

Between 2012 and 2016 golf participation was fairly static but had started to rise before 2020. While the Covid-19 pandemic had an impact, the surge in popularity golf has enjoyed and sustained is testament to the endeavours of so many involved in the sport. I would particularly like to thank national federations for their hard work and partnership as we collectively grow the game.

It truly is a wonderful sport to be involved in and I look forward to building on the fantastic work that The R&A team have achieved over the last decade to help maintain this momentum. Through the collective work of our development activities, the support of national federations and the wider golf industry, there remain opportunities for further growth. New golfer participation programmes with appealing propositions, promotion and imagery are important for encouraging more people into golf and retaining them in greater numbers.

Our vision at The R&A is to ensure golf is open to all and enjoyed by people of all ages, abilities, backgrounds, genders and ethnicities. It is therefore important that we find ways to support new players coming into the sport – as well as returning golfers – and look after existing, core players. We must also create pathways for newer golfers who want more formal golf experiences to be able to access them.

We must keep connecting more people to golf clubs and facilities while, at the same time recognising that for some people alternative formats provide everything they want, at least for now.

The opportunity to work within golf and help shape its future is a huge personal motivation for me and I'm excited for the years ahead. This report is valuable in allowing us to track key trends and benchmark progress. As the sport continues to blossom, thank you again to those involved for your energy and commitment in helping to contribute to the report.

The Sporting Insights perspective.

We are pleased to have partnered once again with The R&A to support this latest edition of The R&A Global* Golf Participation Report. It is a privilege to support such a significant piece of work – one that offers not only a detailed view of the current health of golf globally, but also provides vital insights that help shape and develop the sport for the future.

We are very pleased to see this year's findings tell such a positive story. With 108 million people (including adults and juniors) now playing golf outside of the USA and Mexico – an increase of 3 million on last year – golf continues to demonstrate its broad appeal. Many organisations in golf, including The R&A at the global level and others more locally, actively promote more flexible golf participation and an evolution away from the more rigid experience of the past, and these initiatives are clearly helping to move golf participation in the right direction.

That golf is not only retaining its core base of 9- and 18-hole players but also successfully engaging new participants – through shorter formats, golf simulators / gamification, family-friendly options, and increasingly inclusive pathways – reflects very positively on the work being done by stakeholders across the globe.

The R&A's leadership in driving evidence-led growth, particularly through tools like The R&A Golf Barometer, is a great example of how governing bodies can facilitate lasting progress in sport.

In a global context, reliable and consistent participation data remains surprisingly scarce. While most major sports have governing bodies at the international level, few produce regular, comprehensive estimates of global participation for their sport. Where figures do exist, they are often sporadic or limited to elite or registered participants. Against this backdrop, golf stands out. The R&A's commitment to producing high-quality, regular monitoring across both traditional and emerging formats sets a benchmark not only for golf but for sport more broadly.

We are delighted to contribute to a project that plays such an important role in the development and understanding of golf at a global level. We look forward to continuing this collaboration and to supporting the sport's future, informed by strong data, clear insights, and a shared commitment to golf's growth.

 **Sporting Insights**

*Global excluding the USA and Mexico

About the process.

To produce the most accurate and reliable assessment of global* golf participation, we draw on a range of data sources, including direct input from national golf associations / federations, and insights from The R&A Golf Barometer – a statistically robust tracking study introduced in 2022.

As in previous years, we gather information from national golf associations / federations to feed in to the global participation extrapolation model, which is used to calculate the number of golfers around the world. National golf associations / federations share their data through a survey distributed by The R&A to its Affiliates globally, or through access granted by the European Golf Association (EGA) to its member data portal.

The main focus of information gathered from the national golf associations / federations is the number of registered golfers in their market. We ask that all registered golfers are included in the registered figures and, if possible, we ask for the total number of registered golfers to be broken down into the number of registered men, women, boys and girls.

As well as the core numbers of registered golfers, we also give the national golf associations / federations the opportunity to provide us with their own evidence or indications of the number of unregistered 9&18 hole golfers and total golf participation in their market, and where this information was shared, we have considered it in our calculations for 2024.

With each iteration of the project, the processes and methodology have become stronger. As a result, for the first time this year, we have calculated a total participation figure that includes both adults and juniors, providing a broader context for the global reach of golf.

We recommend using registered golfer figures as the most core indicator of golf's health in a given market, which is a measure of association with national golf associations / federations in a consistent manner. However, even registered golfer numbers are subject to change due to factors on the golf association / federation's side, such as adjustments in measurement methods or database / CRM maintenance and updates.

The level of information shared by national golf associations / federations varies over time. In cases where a market had not submitted data in previous years, new estimates from the golf association / federation itself may indicate a change. In some cases, this may suggest a decline in golf participation in particular markets. However, such variations reflect refinements in the model, increased historical data, and additional total participation estimates provided by some Affiliates. Our approach and processes remain consistent year-on-year, meaning that the estimates produced are as robust and well-founded as they can be.

For the 2024 evaluation, we received input from 103 national golf associations / federations in The R&A's jurisdiction around the world. For those not submitting information we have estimated in line with their previous data, with an adjustment for change in population size. Estimates for the other golfer categories are made using information on that market's registered golfers, previous estimates, golf association / federation feedback and the understanding of golfer behaviour gathered through The R&A Golf Barometer.

*Global excluding the USA and Mexico

About The R&A Golf Barometer.

The R&A Golf Barometer was initiated by The R&A in nine core markets in 2022 in order to help national golf associations / federations in their work and enable the development of golf globally.

Information on individuals' own behaviour and attitudes towards golf is gathered through a nationally representative quarterly tracking survey of adults in core golfing markets. The composition of the sample represents the composition of the population as defined by the national census in each market as much as possible.

Each quarterly wave of fieldwork gathers feedback from 1,250 adults in each of these markets, leading to a total annual sample of 5,000 adults per market.

A sample size of 5,000 adults (or 4,000 for smaller populations) drawn from a full-country population provides a strong basis for statistical analysis. At a 95% confidence level, this sample size yields a margin of error of approximately 1.4%, which is considered highly reliable for estimating population proportions. This means that any proportion measured in the sample is likely to be within $\pm 1.4\%$ of the true population value, 95 times out of 100. This margin of error is well within the range considered to be 'standard' in public opinion research and large-scale surveys.

The R&A Golf Barometer represents an estimated 84% of the 9&18 hole golfers in The R&A's jurisdiction. Using a consistent and statistically robust methodology, The R&A Golf Barometer is invaluable in the estimation process for the broader golf participation figures.

The core markets included in the Barometer since its launch in 2022 are:

Argentina

Australia

Canada

France

Germany

Great Britain & Ireland

Japan

South Africa

South Korea

Glossary & definitions.

Gathering the information

DATA SOURCE

The numbers have been estimated by drawing on multiple sources:

- European numbers were submitted by individual national golf associations / federations through the EGA Member Portal.
- Numbers from the rest of the world (ROW) were submitted by individual nations via a survey link circulated by The R&A.
- Information from national golf associations / federations, The 2024 R&A Golf Barometer and industry estimates were used to be able to project and calibrate the numbers in the non-registered categories. Where individual markets were included in the 2024 R&A Golf Barometer, consistent figures have been mostly used for the Global Participation estimates.
- Where information is incomplete or inconsistent we have used previous estimates to balance information for a particular market.
- Where reliable golf course numbers have been provided by national golf associations / federations, these have been used. Where new information is not available, golf course numbers have been taken from the National Golf Foundation's 'Golf Around the World' service - International Golf Course Update December 2023 or other information.
- Population figures have been sourced from the World Bank's most recently available metrics, downloaded on the 11th March 2025 (<https://data.worldbank.org/indicator/SP.POP.TOTL>) or local official figures where information is not available through this source.

Global golfer number estimates

CALCULATING PARTICIPATION FIGURES

This iteration of the Global Golf Participation estimates is the third time that an estimate has been made for Total Golf Participation based on anything other than the core recorded figures. Until this year, the total figure was known as 'Total Engagement', however this has now been amended to 'Total Participation' to better reflect the need for an active involvement in the sport and that, for example, fan following is not included.

For the most part, registered golfer numbers are provided by the national golf association / federation, although not all national golf associations / federations are able to provide figures, and not all are able to differentiate between men, women, boys and girls. Where registered figures from the national golf association / federation are not available, estimates have been made based on historical data, other research and industry knowledge.

The other golfer categories (full length (9&18 hole) course users, other format golfers (not 9&18 hole) and total participation) are based on estimates from the national golf associations / federations, other research and industry knowledge.

Total participation figures may exceed the sum of each of the other golfer categories in individual markets and in regional summaries. Total participation figures use research carried out for The R&A Golf Barometer, but separate estimates for the different golfer categories are considered if they are provided by national golf associations / federations. This may mean that total participation estimates are higher than national golf association / federation estimates if this is indicated by The R&A Golf Barometer, or higher than The R&A Golf Barometer if this is indicated by the national golf associations.

Definitions

REGISTERED GOLFERS

- The number of golfers who are affiliated to the golf association / federation (they may be members of golf clubs or affiliated to the golf association / federation in another way, eg through a direct subscription). This figure includes registered juniors for year-on-year and cross-market consistency in the majority of cases.

9&18 HOLE GOLFERS (REGISTERED AND UNREGISTERED)

- Golfers who have played on a full length 9 or 18 hole golf course at least once in the last year, including golfers that are registered with their national golf association / federation and those that are not.

OTHER FORMAT GOLFERS (NOT 9&18 HOLE)

- People who have NOT played on a 9 or 18 hole course in the part year but have played another format of golf. This could be: 6 hole, par 3 / short course, Pitch & Putt, Putting green / putting experience, Adventure Golf (eg themed golf venue – Pirate Golf / Prehistoric Golf), Driving Range – with tracker technology, Driving Range – without tracker technology, Indoor Golf simulator (e.g. City Golf / Urban Golf), Golf on school pitches are included as other formats of golf.

TOTAL ADULT PARTICIPATION

- People who have played any on-course or other format at least once in the past year.

REGISTERED JUNIOR GOLFERS

- The number of junior golfers who are affiliated to the golf association / federation (they may be members of golf clubs or affiliated to the golf association / federation in another way, eg through a direct subscription).

TOTAL JUNIOR PARTICIPATION

- Junior golfers who have taken part in any format of golf in the past year, but are not affiliated to their national golf association / federation. Included formats are: 18 hole, 9 hole, 6 hole, par 3 / short course, Pitch & putt, Putting green / putting experience, Adventure Golf (eg themed golf venue – Pirate Golf / Prehistoric Golf), Driving Range – with tracker technology, Driving Range – without tracker technology, Indoor Golf simulator, (eg City Golf / Urban Golf), Golf on school pitches.

Global* overview.

- Golf participation by region - 2024:

Region	All registered golfers 2024 (millions)	All 9&18 hole golfers (registered and unregistered) 2024 (millions)	Total adult participation 2024 (millions)	Total junior participation 2024 (millions)
Africa	0.3	0.7	4.9	7.5
Asia	2.1	20.3	26.2	8.6
Canada	0.6	5.7	6.9	2.9
Caribbean	0.01	0.03	0.1	0.01
Central & South America	0.1	0.3	1.4	4.0
Europe	4.7	13.6	20.3	18.5
Middle East	0.02	0.04	0.1	0.02
Oceania	0.6	2.6	4.3	2.4
Total	8.4	43.3	64.1	43.9

- Core golfer categories – 2024 vs 2023:

Registered golfers	9&18 hole golfers
+3%	+1%
Total adult participation	Total junior participation
+3%	+3%

Golfer categories	2023 (millions)	2024 (millions)
Registered golfers	8.2	8.4
9&18 hole golfers	42.7	43.3
Total adult participation	62.3	64.1
Registered juniors	0.6	0.7
Total junior participation	42.8	43.9
Total participation (adult + junior)	105.1	108.0

'Total participation' and 'playing golf' include participation in all formats of golf – on-course and other formats, and is a broader definition than registered golfers or 9&18 hole golfers.

Total participation figures may exceed the sum of each of the other golfer categories in individual markets and in regional summaries. Total participation figures use research carried out for The R&A Golf Barometer, but separate estimates for the different golfer categories are considered if they are provided by national golf associations / federations. This may mean that total participation estimates are higher than national golf association / federation estimates if this is indicated by The R&A Golf Barometer, or higher than The R&A Golf Barometer if this is indicated by the national golf associations / federations.

Please see the Glossary for the full definitions.

Please note: Some tables and charts show rounded figures. Figures were rounded after calculations were carried out. The figures for total 9&18 hole golfers and total registered golfers include juniors in the majority of cases.

** The R&A Global figures exclude the USA and Mexico.*

About The R&A Golf Barometer

The R&A Golf Barometer is a proprietary quarterly tracking survey which uses nationally representative samples of adults in core golfing markets. The composition of the sample represents the composition of the population as defined by the national census in each market as much as possible.

The core markets included in the Barometer since its launch in 2022 are: Great Britain & Ireland, France, Germany, Canada, South Africa, Japan, South Korea, Australia and Argentina. Each quarterly wave of fieldwork gathers feedback from 1,250 adults in each of these markets, leading to a total annual sample of 5,000 per market.

The sample size of 5,000 (or 4,000 for smaller populations) drawn from a full-country population provides a strong basis for statistical analysis. At a 95% confidence level, this sample size yields a margin of error of approximately 1.4%, which is considered highly reliable for estimating population proportions. This means that any proportion measured in the sample is likely to be within $\pm 1.4\%$ of the true population value, 95 times out of 100. This margin of error is well within the range considered to be 'standard' in public opinion research and large-scale surveys.

Please note: Some tables and charts show rounded figures. Figures were rounded after calculations were carried out.

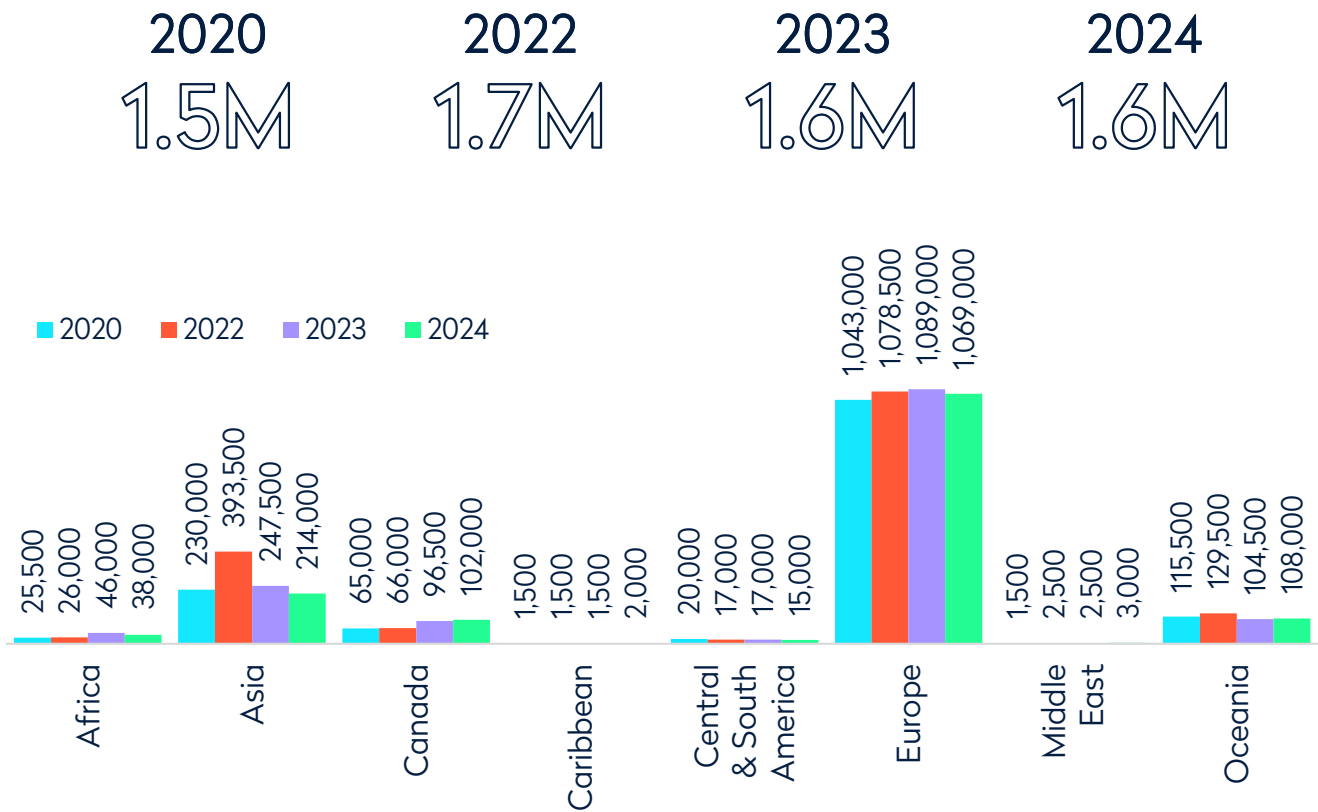

* The R&A Global figures exclude the USA and Mexico.

Women's representation.

Registered golfers

- Registered golfers who are women:

- Markets with more than 100,000 adult registered golfers and a minimum of 15% representation of women:

Country	% of adult registered golfers who are women	Number of registered adults
Germany	33%	644,461
Netherlands	30%	429,804
Denmark	26%	155,408
Vietnam	26%	149,600
Finland	24%	136,215
France	24%	400,259
Spain	23%	268,876
Sweden	21%	480,169
Canada	19%	534,488
New Zealand	19%	135,383
Norway	18%	128,393
Ireland	18%	198,185
Australia	17%	435,516
Republic of Korea	16%	189,326

Please note: Some tables and charts show rounded figures. Figures were rounded after calculations were carried out.

Women's representation.

Broader golfer categories

- As part of the Global Golf Participation data gathering, national golf associations / federations are asked to provide specific numbers of registered men and women if possible, and many are able to do this. Estimating the gender split of the other categories is more challenging, but The R&A Golf Barometer, which is based on survey data, is able to give insight into this. The following charts show the proportion of each golfer type that identify as each gender in the nine key golf markets covered by the programme.
- Across the core nine Barometer markets overall:

All 9&18 hole adult golfers

25%

...identify as women

Other format adult golfers (not 9&18 hole)

50%

...identify as women

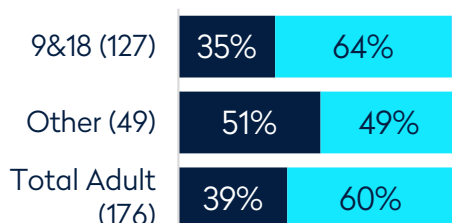

Total adult participation

31%

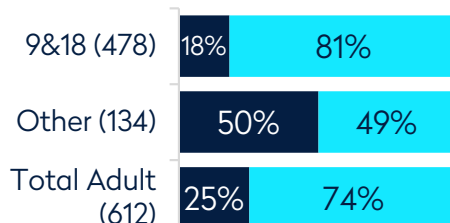

...identify as women

■ Women ■ Men ■ Non-binary / Refused

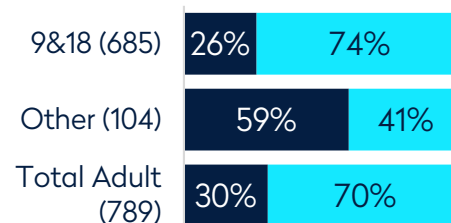

Argentina

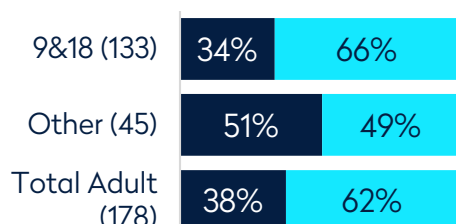

Australia

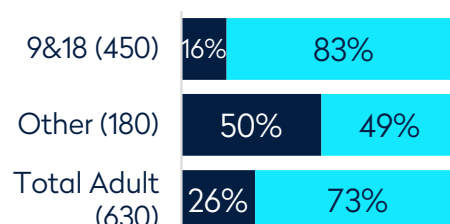

Canada

South Africa

Junior golfers.

- Information on the number of junior golfers is limited in many markets, but based on the information available and data gathered through The R&A Golf Barometer, estimates of junior participation are as follows:

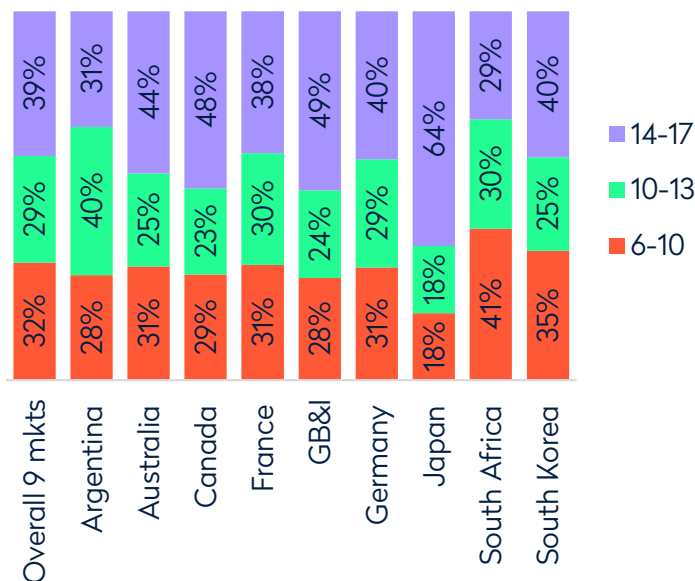

Region	Registered junior golfers 2024 (thousands)
Africa	27k
Asia	143k
Canada	16k
Caribbean	1k
Central & South America	6k
Europe	421k
Middle East	2k
Oceania	38k
Total	654k +9% vs 2023

Region	Total junior participation 2024 (millions)
Africa	7.5M
Asia	8.6M
Canada	2.9M
Caribbean	0.01M
Central & South America	4.0M
Europe	18.5M
Middle East	0.02M
Oceania	2.4M
Total	43.9M +3% vs 2023

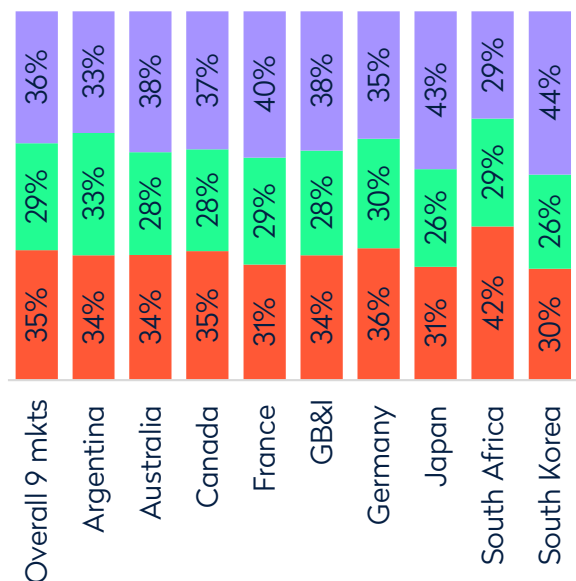

- The R&A Golf Barometer suggests that of all junior golfers (aged 6-17), around 20% have played 9 or 18 hole golf in the past year.
- The remaining 80% have only played other (not 9 or 18 hole) formats.

- Age of junior golfers is not gathered through the Global Golf Participation research, but The R&A Golf Barometer is able to give a directional insight into the age of juniors taking part in each of the broader golfer categories in the nine key golf markets covered by the programme:

Age: Junior 9&18 hole golfers

Age: Total junior participation

'Total junior participation' includes participation in all formats of golf – on-course and other formats, and is a broader definition than registered junior golfers. Information on junior participation gathered through The R&A Golf Barometer is provided by the adult respondent about the behaviour of children in their household.

Please see the Glossary for the full definitions

Please note: Some tables and charts show rounded figures. Figures were rounded after calculations were carried out. The figures for total 9&18 hole golfers and total registered golfers include juniors in the majority of cases.

Great Britain & Ireland Focus.

Please note: Some tables and charts show rounded figures. Figures were rounded after calculations were carried out.
The figures for total 9&18 hole golfers and total registered golfers include juniors in the majority of cases.
The total adult participation figure is slightly different to the total adult participation figure determined by The R&A Golf Barometer due to input from the national associations / federations and calculation of separate regional totals for the Global Participation report vs a combined GB&I market survey for The R&A Golf Barometer.
