Introduction

Microsoft Power Platform Fundamentals

(PL-900) - 2025 Edition

Best Practices Using LearnKey's Online Training

LearnKey offers video-based training solutions that are flexible enough to accommodate private students and educational facilities and organizations.

Our course content is presented by top experts in their respective fields and provides clear and comprehensive information. The full line of LearnKey products has been extensively reviewed to meet superior quality standards. Our course content has also been endorsed by organizations such as Certiport, CompTIA®, Cisco, and Microsoft. However, it is the testimonials given by countless satisfied customers that truly set us apart as leaders in the information training world.

LearnKey experts are highly qualified professionals who offer years of job and project experience in their subjects. Each expert has been certified at the highest level available for their field of expertise. This expertise provides the student with the knowledge necessary to obtain top-level certifications in their chosen field.

Our accomplished instructors have a rich understanding of the content they present. Effective teaching encompasses presenting the basic principles of a subject and understanding and appreciating organization, real-world application, and links to other related disciplines. Each instructor represents the collective wisdom of their field and within our industry.

Our Instructional Technology

Each course is independently created based on the manufacturer's standard objectives for which the course was developed.

We ensure that the subject matter is up-to-date and relevant. We examine the needs of each student and create training that is both interesting and effective. LearnKey training provides auditory, visual, and kinesthetic learning materials to fit diverse learning styles.

Course Training Model

The course training model allows students to undergo basic training, building upon primary knowledge and concepts to more advanced application and implementation. In this method, students will use the following toolset:

Pre-assessment: The pre-assessment is used to determine the student's prior knowledge of the subject matter. It will also identify a student's strengths and weaknesses, allowing them to focus on the specific subject matter they need to improve the most. Students should not necessarily expect a passing score on the pre-assessment as it is a test of prior knowledge.

Video training sessions: Each training course is divided into sessions or domains and lessons with topics and subtopics. LearnKey recommends incorporating all available external resources into your training, such as student workbooks, glossaries, course support files, and additional customized instructional material. These resources are located in the folder icon at the top of the page.

Exercise labs: Labs are interactive activities that simulate situations presented in the training videos. Step-by-step instructions and live demonstrations are provided.

Post-assessment: The post-assessment is used to determine the student's knowledge gained from interacting with the training. In taking the post-assessment, students should not consult the training or any other materials. A passing score is 80 percent or higher. If the individual does not pass the post-assessment the first time, LearnKey recommends incorporating external resources, such as the workbook and additional customized instructional material.

Workbook: The workbook has various activities, including fill-in-the-blank questions, short answer questions, practice exam questions, and group and individual projects that allow the student to study and apply concepts presented in the course videos.

Using This Workbook

This project workbook contains practice projects and exercises to reinforce the knowledge you have gained through the video portion of the **Microsoft Power Platform Fundamentals (PL-900)** course. The purpose of this workbook is twofold. First, get you further prepared to pass the Microsoft Power Platform (PL-900) exam, and second, to teach you job-ready skills and increase your employability in the area of Power Platform fundamentals.

The projects within this workbook follow the order of the video portion of this course. To save your answers in this workbook, you must first download a copy to your computer. You will not be able to save your answers in the web version. You can complete the workbook exercises as you go through each section of the course, complete several at the end of each domain, or complete them after viewing the entire course. The key is to go through these projects to strengthen your knowledge in this subject.

Each project is based upon a specific video (or videos) in the course and specific test objectives. The materials you will need for this course include:

- LearnKey's **Microsoft Power Platform Fundamentals (PL-900)** courseware.
- The course project files. All applicable project files are located in the support area where you downloaded this workbook.
- A trial version of Power Platform is necessary to complete all the workbook projects.

For Teachers

LearnKey is proud to provide extra support to instructors upon request. For your benefit as an instructor, we also provide an instructor support .zip file containing answer keys, completed versions of the workbook project files, and other teacher resources. This .zip file is available within your learning platform's admin portal.

Notes

- Extra teacher notes, when applicable, are in the Project Details box within each exercise.
- Exam objectives are aligned with the course objectives listed in each project, and project file names correspond with these numbers.
- The Finished folder in each domain has reference versions of each project. These can help you grade projects.
- Short answers may vary but should be similar to those provided in this workbook.
- Teachers may consider asking students to add their initials, student ID, or other personal identifiers at the end of each saved project.
- Refer to your course representatives for further support.

We value your feedback about our courses. If you have any questions, comments, or concerns, please let us know by visiting <https://about.learnkey.com>.

Skills Assessment

Instructions: Rate your skills on the following tasks from 1-5 (1 being needs improvement, 5 being excellent).

Skills	1	2	3	4	5
Describe the business value of Microsoft Power Platform services.					
Describe the business value of extending business solutions by using Microsoft Power Platform.					
Describe Microsoft Power Platform administration and governance.					
Describe Microsoft Dataverse.					
Describe connectors.					
Identify basic Power BI components.					
Build a basic dashboard by using Power BI.					
Identify basic Power Apps capabilities.					
Build a basic canvas app.					
Build a basic model-driven app.					
Identify basic Power Automate components.					
Build a basic Power Automate flow.					
Describe the capabilities of Power Pages.					
Describe Copilot Studio.					
Describe the capabilities of AI Builder.

Lesson 1

Microsoft Power Platform Fundamentals

(PL-900) - 2025 Edition

Power Platform Tools

Microsoft Power Platform is not one tool. Instead, it is a set of tools used to improve and drive business processes. These tools include Power BI, Power Automate, Power Apps, Power Pages, and Power Virtual Agent. Each of these tools can be used for different business-related tasks.

Purpose

Upon completing this project, you will better understand the different tools available in Power Platform.

Steps for Completion

- Match the Power Platform tool to its description.

A. Power BI	B. Power Automate	C. Power Apps
D. Power Pages	E. Power Virtual Agent	

- _____ Uses flows to complete routine processes
 - _____ Used to build chatbots that can direct people visiting a website based on what people say and how they respond to questions
 - _____ Used to build single-page or multi-page reports that visualize data
 - _____ Used to build external websites
 - _____ Used to build applications that interact with data
- What is the biggest benefit of Power Platform in relation to programming requirements?
 - _____
 - _____

Project Details

Domain 1

Topic: Power Apps and Power BI

Subtopic: Power Apps to Build Apps

Objectives covered

1 Describe the Business Value of Microsoft Power Platform

1.1 Describe the business value of Microsoft Power Platform services

1.1.1 Describe the value of Power Apps to build applications

Flows

Automation is a major feature of Power Platform. Automation saves time and money and reduces errors in business processes. Understanding how to use automation in Power Apps can help users get the most out of the applications they create.

Purpose

Upon completing this project, you will better understand flows.

Steps for Completion

1. What is the purpose of flows?
 - a. _____

2. How can users create flows?
 - a. _____

3. Which Power Platform application is used to build flows?
 - a. _____

Project Details

Subtopic: Power Apps to
Automate Processes

Objectives covered

1 Describe the Business Value of
Microsoft Power Platform

1.1 Describe the business value of
Microsoft Power Platform services

1.1.2 Describe the value of Power
Automate to automate processes

Power BI

Power BI is a tool available in Power Platform that allows users to create detailed reports. Power BI exists as a desktop version and a cloud version. Power BI gives users the ability to create complex reports with little to no code.

Purpose

Upon completing this project, you will better understand Power BI.

Steps for Completion

1. What is a visualization?
 - a. _____
2. What is the cloud-based version of Power BI?
 - a. _____

3. What is the biggest benefit of Power BI?
 - a. _____

1.1.3 Describe the value of Power BI to gain insights into data

Domain 1

Lesson 2

Microsoft Power Platform Fundamentals

(PL-900) - 2025 Edition

Power Pages

Power Pages is the newest tool in Power Platform. Power Pages allows users to create data-driven, external-facing websites with little to no code. Users can customize websites built using Power Pages to make the websites fit their business needs.

Purpose

Upon completing this project, you will better understand Power Pages.

Steps for Completion

1. Determine whether each statement regarding Power Pages is true or false.
 - a. _____ Websites can be built inside of a studio using templates.
 - b. _____ Using Power Pages to build websites requires a full-time web developer.
 - c. _____ Webpages cannot be designed to fit mobile devices' screens.
 - d. _____ Users can edit the code used to build Power Pages websites if needed.

1.1 Describe the business value of Microsoft Power Platform services

1.1.4 Describe the value of Power Pages to build websites

Connectors

The different parts of Power Apps integrate with one another. However, users will sometimes want Power Apps to integrate with outside resources. Connectors allow users to connect Power Apps to outside resources.

Purpose

Upon completing this project, you will better understand connectors.

Steps for Completion

1. How can users find out how a connector is being used?
 - a. _____
2. In addition to Power Apps, what other Power Platform tool can use connectors?
 - a. _____
3. Name at least two external sources that can be accessed using connectors.
 - a. _____

Project Details

Project file

N/A

Domain 1

Topic: Power Pages and Connectors

Subtopic: Connectors for Integrating Data

Objectives covered

1 Describe the Business Value of Microsoft Power Platform

1.1 Describe the business value of Microsoft Power Platform services

1.1.5 Describe the value of connectors to integrate services and data

Dataverse

A Dataverse is a central part of many Power Platform tools. A Dataverse can store and manage data from many sources. Users can also customize a Dataverse to meet business needs.

Purpose

Upon completing this project, you will better understand Dataverses.

Steps for Completion

1. What is a Dataverse?
 - a. _____

2. What three Power Platform tools can a Dataverse integrate with?
 - a. _____

3. Where is a Dataverse stored?
 - a. _____
4. When is a Dataverse created?
 - a. _____

5. Determine whether the statement is true or false.
 - a. _____ Dataverses can have custom tables added to them.

Project Details

Project file

Domain 1

Topic: Power Pages and Connectors

Subtopic: Dataverse for Business Data

Objectives covered

1 Describe the Business Value of Microsoft Power Platform

1.1 Describe the business value of Microsoft Power Platform services

1.1.6 Describe the value of Microsoft Dataverse to organize business data

Artificial Intelligence

Artificial intelligence (AI) is prevalent in Power Platform. AI can be used to automate processes. The AI Builder in Power Apps can be used to create AI models that perform automated business tasks.

Purpose

Upon completing this project, you will better understand how to use AI in Power Platform.

Steps for Completion

1. What processes can AI automate within Power Platform?
 - a. _____
2. Use Copilot to start the process of building an app in Power Apps.
3. Use Copilot to add a button to the app.
4. Use Copilot to change the text on the button.

Project Details

Topic: Power Pages and Connectors

Subtopic: Copilot and Generative AI

Objectives covered

1 Describe the Business Value of Microsoft Power Platform

1.1 Describe the business value of Microsoft Power Platform services

1.1.7 Describe the value of Copilots and generative AI features in Microsoft Power Platform

Domain 1

Lesson 3

Microsoft Power Platform Fundamentals

(PL-900) - 2025 Edition

Integrating with External Microsoft Applications

Power Platform can work with many other tools to save an organization time and effort in business processes and application development. Dynamics 365 can help a business run its entire operation, from personnel to clients to inventory and all points in between. In conjunction with Microsoft 365 applications and services, many processes that would otherwise be done manually can be automated using Power Platform. Microsoft Teams is a multifaceted collaboration tool that fosters communication between coworkers within a business and between businesses. Many processes can be automated in this collaboration tool.

Purpose

Upon completing this project, you will better understand the purpose of integrating Dynamics 365 and Microsoft 365 with Power Platform.

Steps for Completion

1. What two types of management does Dynamics 365 help businesses handle?
 - a. _____
 - _____
2. Describe one way in which integrating Power Platform with Dynamics 365 can benefit a business.
 - a. _____
3. List two or more Microsoft 365 applications that Power Platform can integrate with.
 - a. _____
 - _____
4. Describe one way in which integrating Power Platform with Microsoft 365 can benefit a business.
 - a. _____
 - _____
 - _____
5. When installing App Studio, how can a Power Apps application be integrated with Teams?
 - a. _____
 - _____
6. Describe one way in which integrating Power Platform with Teams can benefit a business.
 - a. _____
 - _____

Project Details

Project file

N/A

Estimated completion time

10 minutes

Domain 1

Topic: Extending Business Solutions

Subtopic: Power Platform and Dynamics 365; Power Platform and Microsoft 365 Apps; Power Platform and Microsoft Teams

Objectives covered

1 Describe the Business Value of Microsoft Power Platform

1.2 Describe the business value of extending business solutions by using Microsoft Power Platform

1.2.1 Describe how Microsoft Power Platform apps work together with Microsoft Dynamics 365 apps

1.2.2 Describe how Microsoft Power Platform business solutions work together with Microsoft 365 apps and services

1.2.4 Describe how Microsoft Power Platform works with Microsoft Teams

Integrating with Other Power Platform Applications

In addition to integrating with external applications, Power Platform applications can work with each other. As with external applications, integrating Power Platform applications with one another can save a business time and reduce errors in business processes.

Purpose

Upon completing this project, you will better understand the purpose of integrating Power Platform applications with one another.

Steps for Completion

1. What is the central point from which Power Platform applications access and work with data?
 - a. _____
2. Describe one way in which Power Platform applications can integrate with one another to benefit a business.
 - a. _____
3. Which Power Platform component can embed reports inside of a Power Apps application?
 - a. _____

1.2.3 Describe how Microsoft Power Platform apps work together

Domain 1

Lesson 4

Microsoft Power Platform Fundamentals

(PL-900) - 2025 Edition

Permissions

When using Power Platform or any other digital tool, users should be aware of the tool's security model. Power Platform's security model is based on identity and access management used in Azure Active Directory.

Purpose

Upon completing this project, you will better understand the security model used for Power Platform.

Steps for Completion

1. Describe role-based access control (RBAC).
 - a. _____

2. What is a role?
 - a. _____
3. Match the role to its description.

A. Power BI Administrator B. Power Platform Administrator

 - a. _____ Can create and manage all aspects of Microsoft Dynamics 365, Power Apps, and Microsoft Flow
 - b. _____ Can manage all aspects of the Power BI product

Project Details

Project file

N/A

Estimated completion time

1.3 Describe Microsoft Power Platform administration and governance

1.3.1 Describe the Microsoft Power Platform security model

Environments

An environment is a container for applications, flows, and data. Each Power Platform instance, or tenant, comes with a default environment that is built under an Azure Active Directory or Azure AD tenant. The four environments available in Power Platform include production environments, sandbox environments, trial environments, and developer environments.

Purpose

Upon completing this project, you will better understand the different environments available in Power Platform.

Steps for Completion

1. How many databases are allowed in each environment?
 - a. _____
2. What is a production environment?
 - a. _____

3. What is a sandbox environment?
 - a. _____

4. What is a trial environment?
 - a. _____

5. What is a developer environment?
 - a. _____

6. What is the purpose of having multiple environments?
 - a. _____

1 Describe the Business Value of Microsoft Power Platform

1.3 Describe Microsoft Power Platform administration and governance

1.3.2 Describe environments

Administrative Tasks

With Microsoft-based tools, knowing where to perform administrative tasks is key to managing these tools well. Two main administrative centers are used for Power Platform administrative tasks: the Microsoft 365 admin center and the Power Platform admin center.

Purpose

Upon completing this project, you will better understand how to perform administrative tasks in Power Platform.

Steps for Completion

1. What are the three main administrative tasks performed in the Microsoft 365 admin center?
 - a. _____
2. In which administrative center is most user management handled?
 - a. _____
3. List three or more administrative tasks that can be performed in the Power Platform admin center.
 - a. _____
 - _____
 - _____

Project Details

Project file

N/A

Estimated completion time

5 minutes

Topic: Administration and Governance

Subtopic: Admin Centers and Portals

Objectives covered

1 Describe the Business Value of Microsoft Power Platform

1.3 Describe Microsoft Power Platform administration and governance

1.3.3 Describe where to perform specific administrative tasks including Microsoft Power Platform admin center and Microsoft 365 admin center

Privacy and Accessibility

Privacy and accessibility are important to business operations. Businesses should ensure that, when possible, data is kept private and tools used by employees are accessible. Microsoft provides two websites where businesses can locate privacy and accessibility guidelines that are applicable to Power Platform.

Purpose

Upon completing this project, you will better understand where to locate privacy and accessibility guidelines for Power Platform.

Steps for Completion

1. In a web browser, navigate to <https://servicetrust.microsoft.com/>
2. Under Reports, Whitepapers and Artifacts, select Privacy and Data Protection.
3. Browse through the available documents.
4. List two or more documents available on the Microsoft Service Trust Portal website.
 - a. _____
5. In a web browser, navigate to <https://www.microsoft.com/en-us/trust-center/product-overview#Microsoft-Power-Platform>
6. Select Microsoft Power Platform.
7. Browse through the available documents.
8. List two or more documents available on the Microsoft Trust Center website.
 - a. _____
9. In a web browser, navigate to <https://www.microsoft.com/en-us/accessibility/>
10. What are the six main areas Microsoft focuses on for accessibility?
 - a. _____
 - _____

Domain 2

Lesson 1

Microsoft Power Platform Fundamentals

(PL-900) - 2025 Edition

Database vs. Dataverse

Microsoft Dataverse is a relational database service within Microsoft Power Platform. It offers pre-built tables to meet a variety of business needs. If a table type is needed but unavailable, a custom table can also be added and built.

Purpose

Upon completing this project, you will better understand the difference between traditional databases and Microsoft Dataverse.

Steps for Completion

1. What is a relational database?
 - a. _____

2. What is the primary difference between Microsoft Dataverse and traditional databases?
 - a. _____

3. From which application home page can the Dataverse be viewed?
 - a. _____

Project Details

Video reference

Domain 2

Topic: Microsoft Dataverse

Subtopic: Databases vs. Dataverse

Objectives covered

2 Identify Foundational Components of Microsoft Power Platform

2.1 Describe Microsoft Dataverse

2.1.1 Describe differences between traditional databases and Microsoft Dataverse

Tables, Columns, Relationships

Dataverse, like traditional databases, organizes data using tables, columns, and relationships. Tables are often related to each other to save time when entering data. Columns are also known as fields and define what type of data is stored in the table.

Purpose

Upon completing this project, you will better understand the purpose of tables, columns, and relationships in Microsoft Dataverse.

Steps for Completion

1. What are the three types of data that can be stored in tables?
 - a. _____
2. Why is it helpful to relate tables to each other?
 - a. _____

3. Which element of a table is used to create relationships between tables?
 - a. _____

Project Details

Estimated completion time

5 minutes

Video reference

Domain 2

Topic: Microsoft Dataverse

Subtopic: Tables, Columns, and Relationships

Objectives covered

2 Identify Foundational Components of Microsoft Power Platform

2.1 Describe Microsoft Dataverse

2.1.2 Describe tables, columns, and relationships in Microsoft Dataverse

Business Logic

Good data refers to relevant data that is formatted properly. Dataverse uses business logic to ensure that good data is entered into a Dataverse database. It can also be used to take actions based on specific events within data. To set up business logic, users create business rules which have actions that occur based on certain conditions.

Purpose

Upon completing this project, you will better understand business logic and its purpose within Microsoft Dataverse.

Steps for Completion

1. In Microsoft Dataverse, create a table named **Tasks**
2. Create new business rule.
 - a. Change the display name to **Five-day-old task**
 - b. Change the first field to Modified On and the type to Formula.
 - c. Change the second field to Created on, the operator to plus, and the Days to 5.
 - d. Select Apply.
3. Drag the Show Error Message action to the right of the condition.
 - a. Change the display name to **Five Day Reminder**.
 - b. For the Error Message, choose Description and type, **This task is five days old. Please update or complete it ASAP.**
 - c. Select Apply and then save the rule.
4. Take a screenshot of the rule.
5. Save the screenshot as **213-Completed** in your Domain 2 Student folder.

2.1 Describe Microsoft Dataverse

2.1.3 Describe business logic in Microsoft Dataverse

Dataflows

Dataflows allow for data to be gathered from multiple sources. The data can then be combined, transformed, and stored in a Dataverse or Azure Data Lake Storage. Doing this allows users to view the data as a single dataset, making it easier to work with that data and improve data processing.

Purpose

Upon completing this project, you will better understand the purpose of dataflows in Microsoft Dataverse.

Steps for Completion

1. What is the benefit of combining data from multiple sources with dataflows?
 - a. _____

2. Determine whether each statement is true or false.
 - a. _____ Data in a dataflow must be refreshed manually.
 - b. _____ Data can be stored in a Dataverse or in Azure Data Lake Storage.

(PL-900) - 2025 Edition

Connector Components

Connectors, also called connections, allow Power Apps and Power Automate to interact with apps, data files, and services. They use Application Programming Interfaces (APIs) to interact with Power Platform. They also need authentication mechanisms to reach the data sources they are connecting to.

Purpose

Upon completing this project, you will better understand the connectors of components in Power Platform.

Steps for Completion

1. What are the two ways connectors can authenticate their data services?
 - a. _____
2. What is the purpose of a connector?
 - a. _____
3. What do connectors use to communicate with Power Platform?
 - a. _____

Subtopic: Connector Components

Objectives covered

2 Identify Foundational Components of Microsoft Power Platform

2.2 Describe Connectors

2.2.1 Describe the components of a connector

Connector Types

There are two main types of connectors in Power Platform. Standard connectors are available to all, while premium connectors are only available to licensees of the standalone versions of Power Apps and Power Automate.

Purpose

Upon completing this project, you will better understand the difference between standard and premium connectors.

Steps for Completion

1. Name two applications that are available as standard connectors.
 - a. _____
 - _____
2. Name two applications that are available as premium connectors.
 - a. _____
 - _____
3. What kind of license is required for premium connectors?
 - a. _____
 - _____

2.2.2 Describe standard and premium connectors

Custom Connectors

Custom connectors may need to be built to communicate with services that are not available as pre-built connectors. They may be required to access specific data or apps that are not public facing.

Purpose

Upon completing this project, you will better understand how to use custom connectors.

Steps for Completion

1. Why might a company need to use a custom connector?
 - a. _____

2. Determine whether the statement is true or false.
 - a. _____ Custom connectors can be made public if Microsoft certifies them.
3. Determine whether the statement is true or false.
 - a. _____ A custom connector requires one to add code manually for the connector to work.

Lesson 1

Microsoft Power Platform Fundamentals

(PL-900) - 2025 Edition

Power BI

Power BI is a low-code or no-code solution for creating reports. There are two tools that users can access within Power BI to build reports and dashboards: Power BI Service and Power BI Desktop. Power BI Service is the cloud-based version of Power BI, while Power BI Desktop is a desktop-based tool. With Power BI Service, users can access data connections, create workspaces, create reports and dashboards, and people from multiple areas can collaborate on building reports. With Power BI Desktop, users can access data from multiple sources and use the Power Query editor tool to model and transform data. People often use Power BI to generate dashboards, workspaces, and reports, which aid in creating Power BI visualizations.

Purpose

Upon completing this project, you will better understand Power BI and its uses.

Steps for Completion

1. If you need a more robust set of tools for working with data as you build reports, use Power BI _____.
2. If you need to share reports quickly, use Power BI _____.
3. A basic _____ is a visualization that can consist of one or more pages.
4. A _____ is a one-page view containing elements of reports, but not likely an entire report.
5. Dashboards are only available on Power BI _____.
6. _____ are private areas where people can work on content before sharing that content with others.
7. Workspaces can contain reports and _____.

Domain 3

Topic: Basic Power BI Components

Subtopic: Power BI Desktop vs. Service; Dashboards, Workspaces, and Reports

Objectives covered

3 Describe the Capabilities of Power BI

3.1 Identify basic Power BI components

3.1.1 Describe Power BI Desktop and Power BI Service

3.1.2 Compare and contrast dashboards, workspaces, reports, and paginated reports

Power Query Editor

Power BI Desktop contains a tool called Power Query that can be used to clean and transform data to ready it for accurate reporting. Data transformations include removing columns, removing rows, splitting columns, and replacing values. The Power Query Editor also includes AI insights, which can be used to identify anomalies and possible trends in data as users prepare visualizations for the data.

Purpose

Upon completing this project, you will begin to create a report and cleanse data in Power BI Desktop. You will also better understand AI insights within Power Query Editor.

Steps for Completion

1. Open Power BI Desktop and start a new report.
2. Add report data from the Excel workbook **311-Traffic Signals.xlsx**
 - a. Transform the data and ensure it appears in the Power Query Editor.
3. Remove duplicate rows from the dataset.
4. Close & Apply all the changes.
5. The _____ AI feature is used to extract and classify text in documents.
6. The _____ AI feature is used to extract text from files such as images and PDFs.
7. The _____ AI feature is used to develop models, which can identify anomalies and predict trends based on existing data.

Lesson 2

Microsoft Power Platform Fundamentals

(PL-900) - 2025 Edition

Add Visualizations

Visualizations are graphical representations of data within reports. Power BI allows organization members to create reports without waiting for a report builder or developer to create their reports.

Purpose

Upon completing this project, you will create a visualization within a report.

NOTE: If you do not have access to Power BI Service, download and install Power BI Desktop to complete this project.

Steps for Completion

1. Open Power BI Service and create a new report using the Paste or manually enter data option.
 - a. You may use Power BI Desktop, but the steps may vary slightly.
2. Open the **321-ResidentCallLog.xlsx** file and copy the data, excluding the header row.
3. Paste the copied data into the Power Query data grid.
4. Accept the Use first row as headers setting, and create a blank report.
5. Select and drag Column1, Column2, and Column3 into the report canvas.
6. Resize the report so that you can easily read it.
7. Rename Column2 **Weekday** and Sum of Column3 **Calls**
8. Save the report as **March Calls** to your workspace.
9. Take a screenshot of the saved report.
10. Save the screenshot as **321-Completed** in your Domain 3 Student folder.

Project Details

Topic: Building a Dashboard

Subtopic: Adding Visualizations

Objectives covered

- 3** Describe the Capabilities of Power BI
- 3.2** Build a basic dashboard by using Power BI
- 3.2.1** Create a Power BI report by adding visualizations

Power BI Dashboards

Power BI Dashboards provide high-level data summaries, with multiple visualizations of these summaries available on dashboards. The purpose of a dashboard is to have multiple reports or parts of reports in one location to analyze and digest easily.

The Q&A feature can be used within a dashboard to determine specific information, which is represented in a new visualization. These visualizations conveniently appear on a dashboard without consumers needing to write any code.

Consuming Power BI reports and dashboards entails gathering desired information from the data within a report. Using filters is one way to consume reports and dashboards. The filters applied to a report update visualizations and can be undone as quickly as they are applied.

Purpose

Upon completing this project, you will build a dashboard, ask questions about data within the displayed report, and then consume the dashboard.

Steps for Completion

1. Open the March Calls report from your workspace.
2. Pin the report to a new dashboard named **March Resident Calls**
3. Navigate to the dashboard.
4. Use the Q&A feature to determine which day of the week has had the most calls.
 - a. Type: **weekday column 2 with the most calls column 3**
5. Which day has had the most calls?
 - a. _____
6. Pin this visual to the existing March Resident Calls dashboard.
7. Exit the Q&A area to view the new visual on the dashboard.
8. Expand the Filters area and apply filters to view the calls for one week instead of an entire date range.
 - a. This visualization can display any week and does not need to match the course video.
9. Take a screenshot of the new visualization.
10. Save the screenshot as **324-Completed** in your Domain 3 Student folder.

Canvas vs. Model-Driven Apps

Two main types of Power Apps are used for application building: canvas and model-driven. Learning the difference between these applications can help determine which application best suits an organization's needs.

Purpose

Upon completing this project, you will become more familiar with canvas and model-driven applications.

Steps for Completion

1. Determine whether each application description is canvas or model-driven.
 - a. _____ Built using strong drag-and-drop functionality.
 - b. _____ One controls how a form will look for an application.
 - c. _____ Applications start from a data set, such as a table in Dataverse.
 - d. _____ Data in this application tends to appear in forms.
 - e. _____ Data in this application tends to appear in lists.
 - f. _____ Takes less time to build but is not as customizable.
 - g. _____ Offers more flexibility with the look and feel of an application.
2. Why are canvas applications called such?
 - a. _____

Objectives covered

4 Demonstrate the Capabilities of Power Apps

4.1 Identify basic Power Apps capabilities

4.1.1 Describe the differences between canvas apps and model-driven apps

Use Cases for Canvas Apps

Canvas applications offer basic Power Apps training for someone new to building applications. The central theme with canvas applications is customization so an organization can make an application work well for its user base.

Purpose

Upon completing this project, you will better understand the use cases for canvas applications.

Steps for Completion

1. Open Power Apps and open the L01_Welcome screen.
2. Add an image placeholder to the lower right corner of the screen.
3. Take a screenshot of the screen and save the file as **412-Completed** in your Domain 4 Student folder.
4. Determine whether the statement is true or false.
 - a. _____ When building a canvas application, data from multiple sources must be related for the application to work.
5. Canvas applications help train someone new to building applications. What is another primary use case for canvas applications?
 - a. _____
 - _____

Domain 4

Topic: Power Apps Capabilities

Subtopic: Use Cases for Canvas Apps

Objectives covered

4 Demonstrate the Capabilities of Power Apps

4.1 Identify basic Power Apps capabilities

4.1.2 Describe use cases for and capabilities of canvas apps

Use Cases for Model-Driven Apps

Model-driven applications are more controlled than canvas applications, while providing a business look and feel when viewing and working with data. However, model-driven apps have less robust customization ability than canvas applications.

Purpose

Upon completing this project, you will better understand the use cases for model-driven applications.

Steps for Completion

1. Open Power Apps and create a new application using the Asset Checkout template.
 - a. What would you select on the screen to create a new asset?
 - i. _____
2. Model-driven applications are built from what?
 - b. _____
3. What can be used as a starting point for applications?
 - c. _____
4. Determine whether the statement is true or false.
 - d. _____ A model-driven application is not as mobile-device friendly nor as customizable as a canvas application.

Using Connectors

Connectors are used to create connections to data sources while building canvas applications. People are authorized to use these data sources, and a GUI connection is easier to make because it does not require code. Applications can also be built from existing data without existing data connections.

Purpose

Upon completing this project, you will become more familiar with using connectors.

Steps for Completion

1. Name three sources for creating a connection in Power Apps.
 - a. _____

2. What are the two options Power Apps offers for connecting to data in SharePoint?
 - a. _____

3. Determine whether each statement is true or false.
 - a. _____ When creating a connection, you may be prompted for credentials.
 - b. _____ When the same connector can be used in multiple places within Power Platform, it is best practice to start building an application and then make a connection.

Options for Creating Canvas Apps

Applications can be created using a blank canvas and no existing data connections. An established connection, such as a connector and list on SharePoint, can also be used to create a canvas application. People must be authorized to use these data sources to build an application.

Purpose

Upon completing this project, you will become more familiar with using the options available for creating canvas applications.

Steps for Completion

1. In Power Apps, create a blank canvas application named **Demo App**
 - a. Choose Tablet format and skip any dialog boxes.
2. Take a screenshot of Screen1 of the application.
3. Save the screenshot as **421b–Completed** in your Domain 4 Student folder.
4. Which type of applications used to be created in Power Apps but are now built on a website in Power Pages?
 - a. _____
5. What type of data are model-driven applications based on?
 - a. _____
6. How is building an application using a connection quicker and easier?
 - a. _____
7. If an organization wants to support iOS and Android devices, what should it do with its apps built through Power Apps?
 - a. _____

4.2.2 Create an app from data

Adding Canvas Controls and Accessibility

One advantage of canvas applications is the ability to drag and drop controls and add functionality. The accessibility feature in canvas applications is also worth noting, as it allows users to add labels to controls. The added control labels help those needing help to realize what is on an application.

Purpose

Upon completing this project, you will become more familiar with adding canvas controls and application accessibility.

Steps for Completion

1. In Power Apps, where do properties for a text label appear?
 - a. _____
2. What should you select in Power Apps to check for accessibility issues?
 - a. _____
3. Determine whether each statement is true or false.
 - a. _____ A control can be added to any screen in an application, and the app will still work as intended.
 - b. _____ Users should be careful not to edit connected data when creating an application, as editing the data in Power Apps will also change the data in the original source.
 - c. _____ In Power Apps, if a text label's properties do not appear, users can make them appear by selecting the expansion arrow.
 - d. _____ All controls added to an application, including imported controls, are editable in Power Apps.
 - e. _____ When running applications from mobile devices, they will run best in their web browser.

Building Responsive Apps

A particular type of control one can drag and drop onto a canvas allows for building responsive designs within an app. A responsive design helps an app fit screens of multiple sizes.

Purpose

Upon completing this project, you will become more familiar with using canvas controls to build responsive apps.

Steps for Completion

1. Which two types of devices benefit most from responsive designs?
 - a. _____
 - b. _____
2. Which feature allows one to see an app simulated on multiple devices?
 - a. _____
3. Which tool is used for responsive design?
 - a. _____
4. Determine whether each statement is true or false.

Working With Forms and Views

Sometimes forms in model-driven applications need to be modified so they will work for people using them. Modifying forms also offers flexibility on how people work with data within the application. Views provide users with an organized way of displaying data from a data source while inside a Power App.

Purpose

Upon completing this project, you will better understand working with forms and views.

Steps for Completion

1. Open Power Apps and edit the Maintenance Task Prototype application.
2. Edit the Task form.
3. Add a Created on Table column to the form.
4. Take a screenshot of the form.
5. Save the screenshot as **432-Completed** in your Domain 4 Student folder.
6. What is the basis for generating forms for model-driven applications?
 - a. _____
7. Determine whether each statement is true or false.
 - a. _____ Selecting Save and Publish will make a view available to anyone with access to an application.
 - b. _____ Views allow people to filter information the way they need to see it in a portal application.

Cloud and Desktop Flows

Power Automate is a flow-building application in Power Platform that makes cloud and desktop flows. Automating tasks with Power Automate reduces the number of possible data entry errors, allowing business processes to run more efficiently. Cloud flows can be created using templates containing pre-built steps within flows. Templates can save time and give people ideas for automating processes through flows.

Purpose

Upon completing this project, you will become more familiar with cloud and desktop flows and cloud flow templates.

Steps for Completion

1. Name two cloud flow templates in Power Automate.
 - a. _____

2. Name one use case example for desktop flows in Power Automate.
 - a. _____

3. Determine whether each statement is true or false.
 - a. _____ Cloud flows automate processes on local files using common desktop applications.
 - b. _____ One reason for using Power Automate is to automate repetitive tasks, saving time.
 - c. _____ Creating a cloud flow does not require writing any code.
4. Aside from saving time, what is another benefit of cloud flow templates?
 - a. _____

Create and Modify a Cloud Flow

Cloud flows in Power Automate are available in three different types: instant, automated, and scheduled. Each of these flows differs in the way that they run. Once a flow is created, users can modify it by editing its triggers or actions.

Purpose

Upon completing this project, you will become more familiar with creating and modifying a cloud flow.

Steps for Completion

1. Open the Power Automate portal.
2. Create an Instant cloud flow named **Follow-up from Teams**
3. Choose to trigger the flow For a selected message.
4. Take a screenshot of the flow.
5. Save the screenshot as **521–Completed** in your Domain 5 Student folder.
6. Match each type of cloud flow to the description of how it runs.

A. Automated

B. Instant

C. Scheduled

- a. _____ Flow that runs on a set timetable, such as hourly, daily, or weekly.
- b. _____ Flow that runs when an event triggers it to run.
- c. _____ Flow that runs on-demand, such as when an app selects a button.

5.2.3 Add flow steps to perform data operations

Run a Cloud Flow

Once a flow is built, running it in a test environment before people begin using it is crucial. Flow checker allows users to ensure a flow is built correctly from a syntax standpoint before testing it.

Purpose

Upon completing this project, you will become more familiar with running a cloud flow.

Steps for Completion

1. Open the Power Automate portal.
2. Edit the Save Outlook.com email attachments to your OneDrive flow.
3. Check the flow to ensure it is built correctly from a syntax standpoint.
4. Take a screenshot of the number of Errors and Warnings found by the Flow checker.
5. Save the screenshot as **524–Completed** in your Domain 5 Student folder.
6. Why is it important to test a flow?

a. _____

Objectives covered

5 Demonstrate the Capabilities of Power Automate

5.2 Build a basic Power Automate flow

5.2.4 Run a cloud flow

Record Steps for a Desktop Flow

A flow can be created in Power Automate Desktop by recording tasks and then editing the flow as needed. Like other flows in Power Automate, recording steps saves time on repetitive tasks for data entry and file management.

Purpose

In this project, you will practice recording steps for a desktop flow.

Steps for Completion

1. Open Power Automate desktop as an administrator.
2. Create a new flow named **Enter Vehicle Inspection Information**
3. Begin recording data entry in the Excel file named **525-Call Log.xlsx**
4. In cell A4 type **5/18/2023**
5. In cell B4 type **Blass**
6. In cell C4 type **Simon**
7. In cell D4 type **Car**
8. In cell E4 type **Passed**
9. Take a screenshot of the flow.
10. Save the screenshot as **525-Completed** in your Domain 5 Student folder.
11. Select Done in the Recorder.

5 Demonstrate the Capabilities of Power Automate

5.2 Build a basic Power Automate flow

5.2.5 Build a basic desktop flow by recording tasks

Domain 6

Lesson 1

Microsoft Power Platform Fundamentals

(PL-900) - 2025 Edition

Power Pages

A website without a tool such as Power Pages would take hours to build and test as both client-side and server-side code would be needed. With Power Pages, no such code is needed, allowing people without a development background to build robust, data-driven sites.

Purpose

Upon completing this project, you will better understand some of the features of Power Pages.

Steps for Completion

1. Determine whether each statement is true or false.
 - a. _____ Users cannot add additional tables from a Dataverse while a website in Power Pages is in progress.
 - b. _____ Website access permissions control both administrative and preview permissions.
 - c. _____ All permissions for Power Pages are controlled in the Power Platform admin center.
 - d. _____ There are many supported languages that can be added to a website through Power Pages.
 - e. _____ Sharing a website sends a link for previewing a website to recipients.
2. What are templates in Power Pages?
 - a. _____

Domain 6

Topic: Power Pages

Subtopic: Use Cases for Power Pages; Other Power Pages Features; Use Cases for Templates; Sharing Data Externally

Objectives covered

6 Demonstrate the Capabilities of Power Pages

6.1 Describe the capabilities of Power Pages

6.1.1 Describe use cases for Power Pages

6.1.2 Describe use cases for templates

6.1.3 Describe how to share data externally

Using Copilot in Power Pages

To save even more time in creating websites in Power Pages, Copilot allows one to use Generative AI to assist in creating websites and components in those websites.

Purpose

Upon completing this project, you will better understand how to use Copilot to create websites in Power Pages.

Steps for Completion

1. Navigate to the home page of Power Pages.
2. Use Copilot to create a website that is a city website that allows people to check utility accounts.
3. Name the website City Utility Prototype.
4. Use the Try Again feature to change the website design to one of your liking.
5. Add all the possible pages to the website.

6 Demonstrate the Capabilities of Power Pages

6.1 Describe the capabilities of Power Pages

6.1.4 Describe use cases for creating sites by using Copilot in Power Pages

Domain 7

Lesson 1

Microsoft Power Platform Fundamentals

(PL-900) - 2025 Edition

Copilot Studio

We have seen in this course Copilot and its role in helping to build apps and websites in Power Platform. Copilot Studio builds agents, which are chatbots used to help employees be more productive and less involved in repetitive tasks.

Purpose

Upon completing this project, you will better understand how to create an agent using Copilot Studio.

Steps for Completion

1. Navigate to the Copilot Studio home page.
2. Start the process of creating a new agent.
3. Use the built-in agent, Safe Travels.
4. Take the default settings for the agent and finish creating the agent.
5. Ask the chatbot a question to test the agent.

Topic: Copilot Studio

Subtopic: Use Cases for Copilot Studio

Objectives covered

7 Describe the AI Authoring Experience with Power Platform

7.1 Describe Copilot Studio

7.1.1 Describe use cases for Copilot Studio

Topics, Entities, and Actions

Three important aspects of creating agents include topics, actions, and entities. These features can be used to create relevant and accurate agents. Users should understand the purpose of each of these features. In addition, it is important that users know how to use these features, such as creating topics from existing content.

Purpose

Upon completing this project, you will better understand how to use topics, actions, and entities to create effective agents.

Steps for Completion

1. What are topics?
 - a. _____
 - _____
 - _____
2. What are actions?
 - a. _____
 - _____
3. What are entities?
 - a. _____
 - _____
4. Which part of Power Platform is the backbone for triggers and actions?
 - a. _____
5. While creating a topic, what sources of information are available to add to the topic?
 - a. _____

Subtopic: Topics, Entities, and Actions; Creating Topics

Objectives covered

7 Describe the AI Authoring Experience with Power Platform

7.1 Describe Copilot Studio

7.1.2 Describe the purpose of topics, entities, and actions

7.1.3 Create a topic by using Copilot Studio

Building Bots

Copilot Studio does not just build agents using pre-built bots. A person can use Copilot Studio to build agents by starting the agent and then configuring it manually.

Purpose

Upon completing this project, you will better understand how to create an agent through a manual process.

Steps for Completion

1. Open Copilot Studio.
2. Start a new agent and utilize the Skip to configure option.
3. Name the chatbot **New Building Permits**
4. Add a description and instructions to the agent.
5. After the agent is created, upload the **714-buildingFAQ.docx** file to the agent to add knowledge to that agent.

Lesson 2

Microsoft Power Platform Fundamentals

(PL-900) - 2025 Edition

AI Builder

AI Builder allows users to add artificial intelligence (AI) facets to applications and workflows. AI Builder can be used in applications in Power Apps and flows in Power Automate. The automated processes that can be created in AI Builder can save a significant amount of time when it comes to repetitive tasks.

Purpose

Upon completing this project, you will better understand how to use AI Builder.

Steps for Completion

1. Where are Generative AI prompts found within AI Builder?
 - a. _____
2. Describe two or more tasks AI Builder can automate.
 - a. _____

3. List the stages of the AI Builder life cycle from beginning to end.
 - a. _____

4. Open Power Apps.
5. Build a new AI model that extracts text from an image.
6. Extract the text from the **632-building.jpeg** file.
7. Take a screenshot of the extracted text.
8. Save the screenshot as **632-Completed** in your Domain 7 Student folder.

Subtopic: Business Value of AI Builder; Use Cases for AI Builder; AI Builder Model Lifecycle

Objectives covered

7 Describe Complementary Microsoft Power Platform Solutions

7.2 Describe the capabilities of AI Builder

7.2.1 Describe the business value of AI Builder

7.2.2 Describe use cases for AI Builder

7.2.3 Describe the lifecycle to create an AI Builder model

Appendix

Microsoft Power Platform Fundamentals

(PL-900) - 2025 Edition

Glossary

Domain 1

Term	Definition
AI Builder	A tool used to build artificial intelligence models and tools to help automate business processes and perform tasks such as sentiment analysis and text recognition.
Azure Active Directory	An identity and access management tool used to provide role-based access control for Power Platform accounts.
Connector	An API that connects an instance of a Power Platform app, such as Power Apps, with data and allows for the app to interact with the data.
Copilot	Microsoft's Generative AI tool. In the context of Power Platform, Copilot helps generate apps, workflows, websites, and agents.
Dashboard	An interactive window containing reports or parts of reports built in Power BI.
Dataverse	A relational database containing standard tables, columns, and relationships and provides many organizations a starting point for working with and interacting with data.
Dynamics 365	A suite of cloud-based apps used to manage a business, its sales, its customers, and its inventory.
Environment	In the context of Power Platform, an isolated container within a tenant for apps, flows, and data.
Generative AI	A form of artificial intelligence used to generate content.
Microsoft 365	A suite of productivity apps that include Word, Excel, PowerPoint, and Outlook.
Microsoft 365 Admin Center	A web-based administrative tool used to manage Microsoft 365 users and their licenses.
Microsoft Azure	A cloud-based infrastructure that can host many computing facets, including virtual machines, networks, apps, databases, and functions.
Microsoft Teams	A multifaceted collaboration tool that fosters communication among people in an organization and between organizations.
Power Apps	An app-building tool used to build data-driven apps, requiring little or no code being written.
Power Automate	A tool used to build flows that automate business processes, requiring little or no code being written.
Power BI	A tool used to build reports and dashboards that show visual representations of data.
Power Pages	A tool used to build interactive, external-facing, data-driven websites with little or no additional coding required to build these websites.
Power Platform	A suite of tools used to aid an organization in automating business processes.
Power Platform Admin Center	A web-based administrative tool used to manage aspects of the Power Platform suite and its components.
RBAC	Role-Based Access Control (RBAC) is a means by which groups of permissions are used to control what people can do within Power Platform and its components.

Domain 2

Term	Definition
Columns	In the context of databases, the definitions of fields used to store data in a table.
Custom Connector	A type of connector built for when a data connection is needed and is not readily available via a standard or premium connector.
Dataflow	A feature that allows for gathering data from multiple sources.
Premium Connector	A type of connector that requires a standalone license and is usually used for SQL Server and third-party-based data connections.
Relationships	In the context of databases, the connecting of data between tables using a common field between the two tables.

Term	Definition
Standard Connector	A type of connector that is available to all Power Platform users and is common for Microsoft 365 connectors and connectors for social media services.
Tables	In the context of databases, the parts of a database that store data.

Domain 3

Term	Definition
AI Insight	An AI tool used to build AI elements into Power BI reports.
Paginated Report	A report containing multiple pages of data.
Power BI Desktop	The installable, desktop-based version of Power BI and can be used to transform data before it is presented in a report.
Power BI Service	A cloud-based version of Power BI and is often used when people need to collaborate on building reports.
Power Query	A tool, found inside of Power BI Desktop, that is used to clean and transform data to ready the data for accurate reporting.
Visualization	A graphical representation of data within a Power BI report.
Workspace	In the context of Power BI, a private area where people can work on content before sharing that content with others.

Domain 4

Term	Definition
Canvas App	A Power Apps app that starts with a form and allows one to drag and drop data fields and labels onto a canvas for flexible app design.
Control	In the context of Power Apps, an item, such as a data field, label, button, or image added to a form or page within an app.
Model-Driven App	A Power Apps app that is built using one or more tables from a dataset with Dataverse.
Responsive Design	A design system in which apps are designed to fit multiple sizes of screens on multiple types of devices.
View	In the context of model-driven apps, an organized method of displaying data within the app.

Domain 5

Term	Definition
Action	In the context of Power Automate, a task that automates a business process.
Automated Flow	A flow that runs based on a trigger, such as an item being posted to a list.
Cloud Flow	A flow built to automate processes using cloud-based data.
Cloud Flow Template	A starting point for flows and contains built-in triggers and actions for common business processes.
Desktop Flow	A flow built to automate processes within desktop apps on a device.
Document Processing	In the context of Power Automate, the automation of text-related tasks, such as extracting text from an image and emailing that text to a recipient.
Flow Step	A trigger or action used to enhance a flow within Power Automate.
Instant Flow	A flow that runs on-demand, such as when a person selects a button.

Term	Definition
Power Automate Desktop	The desktop-based version of Power Automate.
Power Automate Mobile	The mobile-based version of Power Automate.
Power Automate Portal	The cloud-based version of Power Automate.
Process Mining	An analysis of timing within processes in a Power Automate flow.
Scheduled Flow	A flow that runs on a set schedule, such as daily, weekly, or monthly.
Task Mining	An analysis of timing within tasks in a Power Automate flow.
Trigger	An event that causes an action to take place, such as sending an email or approving or forwarding a request for approval.

Domain 6

Term	Definition
Template	In the context of Power Pages, a pre-built layout for a website.

Domain 7

Term	Definition
AI Builder Lifecycle	The process in which an AI Builder model is defined, created, trained, tested, deployed, and monitored.
Chatbot	An app used to automate conversations on processes and topics common to an organization's everyday business processes.
Copilot Studio	A tool that builds agents, which are used for processes that perform tasks and run chatbots.
Entities	In the context of Power Virtual Agents, a keyword that drives a topic response.
FAQ Document	A document that has common questions and answers often used in a conversation and can be a starting point for topics in Power Virtual Agents.
Topic	In the context of Power Virtual Agents, a conversation flow representing questions and tasks someone may type into a chat box.

Objectives

Microsoft Power Platform Fundamentals (PL-900) Objectives		
Domain 1 Describe the Business Value of Microsoft Power Platform	Domain 2 Identify Foundational Components of Microsoft Power Platform	Domain 3 Describe the Capabilities of Power BI
1.1 Describe the business value of Microsoft Power Platform services 1.1.1 Describe the value of Power Apps to build applications 1.1.2 Describe the value of Power Automate to automate processes 1.1.3 Describe the value of Power BI to gain insights into data 1.1.4 Describe the value of Power Pages to build websites 1.1.5 Describe the value of connectors to integrate services and data 1.1.6 Describe the value of Microsoft Dataverse to organize business data 1.1.7 Describe the value of Copilots and generative AI features in Microsoft Power Platform	2.1 Describe Microsoft Dataverse 2.1.1 Describe differences between traditional databases and Microsoft Dataverse 2.1.2 Describe tables, columns, and relationships in Microsoft Dataverse 2.1.3 Describe business logic in Microsoft Dataverse	3.1 Identify basic Power BI components 3.1.1 Describe Power BI Desktop and Power BI Service 3.1.2 Compare and contrast dashboards, workspaces, reports, and paginated reports 3.1.3 Describe how AI Insights help identify anomalies and trends in data
1.2 Describe the business value of extending business solutions by using Microsoft Power Platform 1.2.1 Describe how Microsoft Power Platform apps work together with Microsoft Dynamics 365 apps 1.2.2 Describe how Microsoft Power Platform business solutions work together with Microsoft 365 apps and services 1.2.3 Describe how Microsoft Power Platform services work together 1.2.4 Describe how Microsoft Power Platform works with Microsoft Teams	2.2 Describe connectors 2.2.1 Describe the components of a connector 2.2.2 Describe standard and premium connectors	3.2 Build a basic dashboard by using Power BI 3.2.1 Create a Power BI report by adding visualizations 3.2.2 Create a Power BI dashboard 3.2.3 Add visualizations to dashboards by using Q&A 3.2.4 Consume Power BI reports and dashboards
1.3 Describe Microsoft Power Platform administration and governance 1.3.1 Describe the Microsoft Power Platform security model 1.3.2 Describe environments 1.3.3 Describe the different Microsoft Power Platform admin centers and portals 1.3.4 Describe how Microsoft Power Platform supports privacy and accessibility guidelines

Pre-Assessment Assessment time - 00:30:00	Demonstrate the Capabilities of Power Automate: Pre-Assessment			
Lesson 1 Video time - 00:05:56 Exercise Lab time - 00:00:00 Workbook time - 00:15:00	Flow Components Cloud and Desktop Flows Cloud Flow Templates Connector Triggers and Actions Use Cases for Apps	5.1 Identify basic Power Automate components 5.1.1 Describe use cases for cloud and desktop flows 5.1.2 Describe use cases for cloud flow templates 5.1.3 Describe how Power Automate cloud flows use connector triggers and actions 5.1.4 Describe Power Automate use cases for approvals, Microsoft Teams, Outlook, SharePoint, and Forms	N/A	Cloud and Desktop Flows – pg. 51 N/A Connector Triggers and Actions – pg. 52 N/A Use Cases for Power Automate – pg. 53 N/A
Lesson 2 Video time - 00:06:45 Exercise Lab time - 00:08:00 Workbook time - 00:20:00	Documents and Tasks Power Automate Apps Desktop Flows Document Processing Process and Task Mining	5.1.5 Describe the Power Automate apps including Power Automate for Desktop, Power Automate mobile, and the Power Automate portal 5.1.6 Describe actions for Power Automate desktop flows 5.1.7 Describe document processing in Power Automate 5.1.8 Describe Process Mining and Task Mining	Desktop Flows Process Mining	Power Automate Apps– pg. 55 N/A Desktop Flows– pg. 56 N/A Document Processing – pg. 57 N/A Process and Task Mining - pg. 58 N/A
Lesson 3 Video time - 00:07:00 Exercise Lab time - 00:04:00 Workbook time - 00:30:00	Building Flows Create a Cloud Flow Modify a Flow Add Flow Steps Run a Cloud Flow Record Steps for a Desktop Flow	5.2 Build a basic Power Automate flow 5.2.1 Create a cloud flow by using an instant, automated, or scheduled flow template 5.2.2 Modify a cloud flow 5.2.3 Add flow steps to perform data operations 5.2.4 Run a cloud flow 5.2.5 Build a basic desktop flow by recording tasks	Add Flow Steps	Create and Modify a Cloud Flow – pg. 60 N/A Add Flow Steps – pg. 61 N/A Run a Cloud Flow – pg. 62 N/A Record Steps for a Desktop Flow – pg. 63 525-Call Log.xlsx

Domain 5 - Demonstrate the Capabilities of Power Automate [approximately 3 hours of videos, labs, and projects]

Lesson	Lesson Topic and Subtopics	Objectives	Exercise Labs	Workbook Projects and Files
Post-Assessment Assessment time - 01:00:00	Demonstrate the Capabilities of Power Automate: Post-Assessment			

Domain 6 Lesson Plan

Domain 6 - Demonstrate the capabilities of Power Pages [approximately 2 hours of videos, labs, and projects]

Lesson	Lesson Topic and Subtopics	Objectives	Exercise Labs	Workbook Projects and Files
Pre-Assessment Assessment time - 00:30:00	Describe Complementary Microsoft Power Platform Solutions: Pre-Assessment			
Lesson 1 Video time - 00:08:48 Exercise Lab time - 00:08:00 Workbook time - 00:15:00	Power Pages Use Cases for Power Pages Other Power Pages Features Use Cases for Templates Sharing Data Externally Copilot in Power Pages	6.1 Describe the capabilities of Power Pages 6.1.1 Describe use cases for Power Pages 6.1.2 Describe use cases for templates 6.1.3 Describe how to share data externally 6.1.4 Describe use cases for creating sites by using Copilot in Power Pages	Power Pages Templates Adding to a Form	Power Pages– pg. 65 N/A Using Copilot in Power Pages– pg. 66 N/A
Post-Assessment Assessment time - 01:00:00	Describe Complementary Microsoft Power Platform Solutions			

Domain 7 Lesson Plan

Domain 7 - Describe the AI Authoring Experience in Microsoft Power Platform [approximately 2.5 hours of videos, labs, and projects]				
Lesson	Lesson Topic and Subtopics	Objectives	Exercise Labs	Workbook Projects and Files
Pre-Assessment Assessment time - 00:30:00	Describe the AI Authoring Experience in Microsoft Power Platform: Pre-Assessment			
Lesson 1 Video time - 00:09:19 Exercise Lab time - 00:04:00 Workbook time - 00:15:00	Copilot Studio Use Cases for Copilot Studio Topics, Entities, and Actions Creating Topics Building Bots	7.1 Describe Copilot Studio 7.1.1 Describe use cases for Copilot Studio 7.1.2 Describe the purpose of topics, entities, and actions 7.1.3 Create a topic by using Copilot Studio 7.1.4 Describe the process of building bots by using Copilot Studio	Creating an Agent	Copilot Studio – pg. 68 N/A Topics, Entities, and Actions – pg. 69 N/A Building Bots – pg. 70 714-buildingFAQ.docx
Lesson 2 Video time - 00:05:02 Exercise Lab time - 00:08:00 Workbook time - 00:15:00	AI Builder Capabilities Business Value of AI Builder Use Cases for AI Builder AI Builder Model Lifecycle	7.2 Describe the capabilities of AI Builder 7.2.1 Describe the business value of AI builder 7.2.2 Describe use cases for AI Builder 7.2.3 Describe the lifecycle to create an AI Builder model	AI Builder Options Create an AI Model	AI Builder – pg. 72 632-building.jpg
Post-Assessment Assessment time - 01:00:00	Describe the AI Authoring Experience in Microsoft Power Platform: Post-Assessment
