

9.4 Using MS Excel tools to build a data dashboard ↕

□ Watch: Data dashboards (part 3) [14.44 mins]

Watch the video below, which provides an example of the process of creating a dashboard for a given case. It also describes the common mistakes that should be avoided when designing and developing a data dashboard.

This is useful as it provides a view of the factors that need to be considered and of the entire process of developing a data dashboard.

MS Excel provides several useful tools that may be used to enhance data dashboards. They allow users to interact with the data, delve deeper into it to achieve a more focused result, and select what is to be displayed. These tools are:

- *PivotTables*. Users can change the data/information that is displayed in a table by using filters to interact with the data.
- *PivotCharts*. Users can change the data/information that is displayed on a chart by using filters to interact with the data.
- *Slicers*. Users can use slicers to filter the data and thereby choose what is displayed in the PivotTables or PivotCharts.

□ Activity: practise creating a basic dashboard
